Benefits & KPIs

measurable value

09

Conclusion & Next Steps

the road ahead

01

Overview

The platform, the problem, and the solution

A single coordination platform for the entire non-clinical patient journey — **before, during and after** hospital treatment.

**Patient Care Coordination**

The whole non-clinical journey, managed in one place.

- Registration & consent
- Service requests & triage
- Case management
- Care services & follow-up

✓ One Case ID ties it all together

**Patient Transportation**

Move patients safely, with verified custody.

- Pickup & drop scheduling
- Ambulance dispatch (PTV / BLS / ALS)
- OTP-verified handover
- Live GPS tracking

✓ Every handover is OTP-verified

**Healthcare Coordination**

Hospitals, doctors & records around the Case.

- Hospital & doctor directory
- Appointment booking
- Medicines & vitals record
- Consent-gated clinical data

✓ Medical data stays protected

TODAY — WITHOUT THE PLATFORM

Fragmented systems

Patients, transport, hospitals & billing live in separate tools — no single view.

No traceability

Events aren't linked; hard to answer 'what happened on this case?'

Manual coordination

Phone calls & spreadsheets to dispatch, book beds and chase payments.

Blind operations

No live picture of agents, ambulances, emergencies or SLA.

Patient anxiety

Families travelling alone have no visibility into the help coming.

The 360° answer

One Case ID links every event, party and payment

Case-oriented, not module-oriented — one journey

Command Centre dispatches with controlled assignment

Live map + live feed = a real-time operational picture

Patient & Agent apps keep everyone in sync, consent-gated

Every operational, clinical, communication & financial event connects to **one Patient Case ID**.

02

End-to-End Workflow

How the whole journey connects under one Case ID

End-to-End Business Flow — the patient journey

From first request to case closure — one continuous, auditable journey

WORKFLOW

Everything below the line happens automatically

- Every step writes a Case timeline event (who / when)
- Emergencies auto-escalate to the emergency path
- Payments trigger WhatsApp / SMS notifications
- Portal & apps update live, both directions

User Role Flow — who does what

Role-based access; each actor sees only their part of the journey

ROLE-BASED

Request-to-Service-Delivery Flow

From a booking to delivered, verified services

WORKFLOW

✓ **Verified delivery:** pickup & hospital handover are confirmed by OTP; every service is logged on the Case with its cost and status.

Case & Request Life Cycle

A controlled state machine with clear exception paths

WORKFLOW

Business rules enforced

- Illegal transitions are rejected by the state machine.
- Every transition is written to the timeline with user & timestamp.
- On Hold & Emergency Escalated are recoverable — the journey resumes.
- Emergency triggers the escalation path (never a substitute for 112).

03

Core Business Diagrams

The models and flows that run the platform

Master Data Relationship Diagram

Every entity connects to exactly one Case

DATA MODEL

Approval Workflows

Quote acceptance · Settlement payout · Complaint SLA

GOVERNANCE

Controls & SLA

- Configurable SLA per priority sets response & resolution due-dates; breaches are flagged.
- Settlements bundle unsettled earnings; payout needs approval + reference.
- Every approval & step is audit-logged; complaints retain their full history.

Patient Onboarding Flow

A guided registration wizard — validated and consent-first

CUSTOMER JOURNEY

✓ **Faster, error-free onboarding with built-in consent & audit — medical data is protected from day one and never exposed to operational roles by default.**

Real-Time Sync Process Flow

Two-way live sync between the mobile apps and the Command Centre

REAL-TIME

App → Portal (instant)

- Patient books → appears in Requests live
- Agent goes Available → marker moves on the map
- Agent accepts / OTP → timeline & dispatch update
- Patient pays → Finance & dashboard update

Portal → App (auto-sync)

- ← Job dispatched → shows in the Agent app
- ← Quote sent → Patient app shows the balance
- ← Status changes → 'My Care' updates live
- ← No manual refresh anywhere

System Integration Diagram

Open, governed APIs — connect the surrounding ecosystem as needed

INTEGRATION

Integrations are optional & consent-based; the platform is architected so each can be added safely without re-work.

Reporting & Dashboard Flow

From live events to operational intelligence

CASE-2026-000006	Vikram Nair	AMBULANCE	EMERGENCY	OPEN

Business Objective

Give the Command Centre a live operational picture — not just a menu.

Validation Rules

Role-based; only permitted data. Counts computed server-side.

Business Benefits

Faster decisions; emergencies & delays surfaced instantly.

Key Highlights

Auto-refreshes live; one click into any case.

Blueprint 6 30 63

PROCESS FLOW

Business Objective

See agents, ambulances & events moving in real time.

Validation Rules

Authorised staff only; emergencies flagged red.

Business Benefits

Ride-hailing-style visibility; proactive control.

Key Highlights

Live map + a streaming event feed.

#8	Live Demo	AMBULANCE	EMERGENCY ESCALATED	-	12/8/2026

Business Objective

Turn a patient's request into a controlled, trackable case.

Validation Rules

Illegal lifecycle transitions blocked; emergency assessed.

Business Benefits

No lost requests; clear ownership & SLA from minute one.

Key Highlights

Multi-service; pickup & destination; live intake.

Emergency flag directs to 112 — never a substitute for emergency care.
