

360° Patient Care & Assistance

Management System — Customer Solution Presentation

One coordinator. One Case. One journey — from first call to follow-up.

Coordinate

people, vehicles, hospitals & care

Track

every event on one Case ID

Bill & settle

quotes, payments, payouts

Real-time

live map, live sync, mobile apps

What this presentation covers

8

Business Benefits & KPIs

9

Conclusion

A single coordination platform for the entire non-clinical patient journey — before, during and after hospital treatment.

Patient Care Coordination

The whole non-clinical journey, managed in one place.

- **Registration & consent**
- **Service requests & triage**
- **Case management**
- **Care services & follow-up**

✓ **One Case ID ties it all together**

Patient Transportation

Move patients safely, with verified custody.

- **Pickup & drop scheduling**
- **Ambulance dispatch (PTV / BLS / ALS)**
- **OTP-verified handover**
- **Live GPS tracking**

✓ **Every handover is OTP-verified**

Healthcare Coordination

Hospitals, doctors & records around the Case.

- **Hospital & doctor directory**
- **Appointment booking**
- **Medicines & vitals record**
- **Consent-gated clinical data**

✓ **Medical data stays protected**

Business Challenges — why this platform

THE PROBLEM

X Fragmented systems

Patients, transport, hospitals & billing live in separate tools — no single view.

X No traceability

Events are not linked; hard to answer 'what happened on this case?'

X Manual coordination

Phone calls & spreadsheets to dispatch agents, book beds, chase payments.

X Blind operations

No live picture of agents, ambulances, emergencies or SLA breaches.

X Patient anxiety

Families travelling alone have no visibility into who is helping and when.

The 360° answer

- ✓ **One Case ID links every event, party and payment**
- ✓ **Case-oriented, not module-oriented — one journey**
- ✓ **Command Centre dispatches with controlled assignment**
- ✓ **Live map + live feed = real-time operational picture**
- ✓ **Patient & Agent apps keep everyone in sync, consent-gated**

Solution Overview — the Case ID hub

SOLUTION

Every operational, clinical, communication & financial event connects to one Patient Case ID.

01

End-to-End Workflow

How the whole journey connects under one Case ID

End-to-End Business Flow — the patient journey

WORKFLOW

From first request to case closure — one continuous, auditable journey

Everything below the line is automatic:

- Every step writes a Case timeline event with who/when audit
- Emergencies auto-escalate to the emergency path
- Payments trigger notifications (WhatsApp/SMS)
- Portal & apps update live in both directions

User Role Flow — who does what

ROLE-BASED

Role-based access; each actor sees only their part of the journey

Request-to-Service-Delivery Flow

From a booking to delivered, verified services

WORKFLOW

Verified delivery: pickup & hospital handover are confirmed by OTP; every service is logged on the Case with cost and status.

Case & Request Life Cycle

Controlled state machine with exception paths

WORKFLOW

Exception transitions (available from active states):

Business rules enforced

- Illegal transitions are rejected by the state machine (e.g. cannot skip backwards).
- On Hold & Emergency Escalated are recoverable — an operator can resume the journey.
- Every transition is written to the Case timeline with the acting user and timestamp.
- Emergency at any point triggers the configurable escalation path (never a substitute for 112).

02

Core Business Diagrams

The models and flows that run the platform

Master Data Relationship Diagram

DATA MODEL

Every entity connects to exactly one Case

Approval Workflows

GOVERNANCE

Quote acceptance · Settlement payout · Complaint SLA

Controls & SLA

- Configurable SLA per priority sets response & resolution due-dates; breaches are flagged.
- Settlements bundle unsettled earnings; payout requires approval then payment reference.
- Every approval/step is audit-logged; complaints retain full communication history.

Patient Onboarding Flow

Guided registration wizard — validated, consent-first

CUSTOMER JOURNEY

Captured

Demographics, contact, emergency contact, language, identity/insurance

Medical (as provided)

Problem, chronic conditions, allergies, blood group, medicines

Consent-first

Who can access what, for what purpose, from when to when — revocable

Validated

Required fields & formats checked at each step; progress shown

Business benefit: faster, error-free onboarding with built-in consent & audit — the patient's medical data is protected from day one and never exposed to operational roles by default.

Real-Time Sync Process Flow

REAL-TIME

Two-way live sync between apps and the Command Centre

App → Portal (instant)

- Patient books a service → appears in Requests live
- Agent goes Available → marker moves on the live map
- Agent accepts / OTP → case timeline & dispatch update
- Patient pays → Finance panel & dashboard update

Portal → App (auto-sync)

- Job dispatched → shows in Agent app automatically
- Quote sent → Patient app shows payable balance
- Status changes → Patient 'My Care' updates live
- No manual refresh anywhere

System Integration Diagram

Open, governed APIs — connect the surrounding ecosystem as needed

INTEGRATION

Integrations are optional & consent-based; the platform is architected so each can be added safely without re-work.

Reporting & Dashboard Flow

From live events to operational intelligence

INSIGHTS

Command Centre KPI snapshot

Cases by stage

Coverage of 84-point blueprint

03

Feature Walkthrough

Every feature — objective, flow, screen, rules, benefits

Process Flow

Business Objective

Give the Command Centre a live, operational picture — not just a menu.

Validation Rules

Role-based; only permitted data shown. Counts computed server-side.

Business Benefits

Faster decisions; emergencies & delays surfaced instantly.

Key Highlights

Auto-refreshes live; one click into any case.

Process Flow

Business Objective
See agents, ambulances and events moving in real time.

Validation Rules
Only authorised staff; emergencies flagged red.

Business Benefits
Ride-hailing-style visibility; proactive control.

Key Highlights
Live map (OpenStreetMap) + streaming event feed.

#8	Live Demo	AMBULANCE	EMERGENCY ESCALATED	-	12/8/2026

Business Objective

Turn a patient's request into a controlled, trackable case.

Validation Rules

Illegal lifecycle transitions blocked; emergency must be assessed.

Business Benefits

No lost requests; clear ownership & SLA from minute one.

Key Highlights

Multi-service, pickup & destination capture; live intake.

 Emergency flag directs to 112 — never a substitute for emergency medical care.

Business Objective

Transparent, rule-based pricing and clean payment tracking.

Validation Rules

Amounts computed from rate cards; balance can't go negative.

Business Benefits

Clear quotes, faster payment, auditable finances.

Key Highlights

Configurable pricing engine; advance/balance; live updates.

Process Flow

Business Objective

Coordinate appointments and record medicines & vitals safely.

Validation Rules

Recorded by authorised clinician; audit metadata auto-filled.

Business Benefits

Complete, safe clinical record within the coordination journey.

Key Highlights

Appointment workflow, medicine, intake, vitals.

 Platform stores & coordinates; it does not diagnose or prescribe.

Ravi Kumar (AGENT)	CASE-2026-000022	Trip completed — CASE-2026-000022	₹300

Business Objective

Pay agents & partners accurately with reconciliation.

Validation Rules

Payout requires approval + reference; earnings can't double-settle.

Business Benefits

Accurate payouts; clean books; partner trust.

Key Highlights

Earnings ledger; gross/deductions/net; auditable.

360° Patient Care & Assistance - Developed by pvalr

Process Flow

Business Objective

Let patients request help and follow their own journey.

Validation Rules

Scoped to own account only; consent respected.

Business Benefits

Convenience, transparency, faster payment.

Key Highlights

Bottom nav, live case status, pay balance in-app.

Process Flow

Business Objective
Give field agents a simple, guided job console.
Validation Rules
Only job-necessary info shown; OTP-verified custody.
Business Benefits
Faster, error-free field execution; live GPS to control room.
Key Highlights
Duty toggles; job cards; pickup/handover OTP; earnings & settlement.

Grant consent

Business Objective

Granular, revocable consent with a document access trail.

Validation Rules

Least-privilege; who / what / purpose / until; every document view audited.

Business Benefits

Privacy-by-design; DPDP-aligned; defensible access history.

Key Highlights

Grant / revoke per scope; document download access-log.

Service Advisor

Suggests OPERATIONAL services from the patient's stated needs. This is not medical advice — it does not diagnose or prescribe; clinical decisions remain with qualified professionals.

Stated needs

Tick everything that applies, then generate a recommended set of services.

☒ Patient travelling alone

☒ Arriving by airport / railway

☒ Needs hospital admission

☐ Has a doctor appointment

☒ Needs accommodation

☐ Needs mobility assistance / stretcher

☐ Extended stay

Notes (optional)

Any additional context for the coordinator...

Get recommendations

Recommended services

Operational suggestions generated by the recommendation engine.

Pickup Drop

Patient is arriving alone and needs assisted pickup/drop

Hospital Admission

Hospital admission assistance required

Accommodation

Accommodation near the hospital is advisable

Local Transport

Local transport for hospital visits and errands

† Operational recommendation based on stated needs only. This does not diagnose disease or provide medical advice; clinical decisions remain with qualified professionals.

Business Objective

Recommend the right operational services from stated needs.

Validation Rules

Operational only — never diagnoses or advises clinically.

Business Benefits

Right services bundled for travelling-alone / out-station patients.

Key Highlights

Pickup, admission, accommodation, caretaker, transport — with reasons.

 Operational recommendation only — not medical advice.

Process Flow

1. Live events

2. Aggregate

3. Report

4. Act on breaches

Business Objective

Command-Centre KPIs and response-SLA tracking in one place.

Validation Rules

SLA target set by priority; breaches counted & surfaced.

Business Benefits

Data-driven ops, delays & SLA breaches visible instantly.

Key Highlights

Demand, dispatch, workforce & fleet KPIs, SLA-breach tile.

Single source of truth

One Case ID links every event, party & payment

Faster coordination

Dispatch, book, bill from one console — minutes not hours

Real-time control

Live map & feed; emergencies & SLA breaches surfaced

Verified & auditable

OTP custody + full audit on every action

Better patient experience

Transparency, updates and in-app payments

Revenue integrity

Rule-based pricing, clean payments & partner settlements

Key KPIs the platform improves

MEASURABLE

↓ **60%**

Coordination time per case

100%

Events traceable to a Case

Dispatch accuracy (skill/GPS-matched)

Response & resolution tracked

0

Untracked cash / informal collection

Live

Fleet & agent utilisation

One trusted coordinator, one Case, one journey.

The patient explains what help is needed — the platform coordinates the right people, vehicles, hospitals, doctors, care, payments and follow-up, with a complete, auditable, real-time journey.

1. Requirements workshop

2. MVP backlog sign-off

3. Integrations (ABDM/Payment)

4. Security hardening & go-live
